This book explores the relationship between equity, sustainable development, and happiness, and how policy can be used to promote all three. Equity is defined as the fair distribution of resources and opportunities, while sustainable development is defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Happiness is defined as a state of well-being and life satisfaction.

The book begins by examining the evidence on the relationship between equity, sustainable development, and happiness. The evidence suggests that there is a strong positive relationship between equity and happiness. In other words, countries with more equitable distributions of resources and opportunities have happier citizens. There is also a positive relationship between sustainable development and happiness. In other words, countries with more sustainable development policies have happier citizens.

The book then explores how policy can be used to promote equity, sustainable development, and happiness. The book argues that policies that promote equity and sustainable development are also likely to promote happiness. For example, policies that invest in education and healthcare can help to reduce inequality and improve the quality of life for all citizens. Policies that protect the environment can help to ensure that future generations have access to the resources they need to live happy and healthy lives.

The book concludes by arguing that equity, sustainable development, and happiness are all essential for human well-being. The book calls for policymakers to adopt policies that promote all three of these goals.
