The book is divided into three parts. The first part provides a mathematical to cosmology, including the basics of general relativity and the Big Bang theory. The second part discusses the applications of light in cosmology, including the use of light to measure distances, determine the age of the universe, and study the formation of galaxies and stars. The third part presents some of the latest research in cosmology, including the search for dark matter and dark energy.

This book is an excellent resource for students and researchers in cosmology. It provides a clear and comprehensive to the mathematical foundations of cosmology, and it discusses the latest research in the field.

Table of Contents

-
- The Theory of General Relativity
- The Big Bang Theory
- The Applications of Light in Cosmology
- The Formation of Galaxies and Stars
- The Latest Research in Cosmology
